

# Key success factors in M2M

20th May 2014 – M2M Forum (Milano)

**O.Beaujard**

# Sierra Wireless Fast Facts

- Based in Vancouver, Canada
- Wireless devices and cloud services for M2M
- Global footprint – R&D in Canada, U.S., Europe and China
- 850 employees worldwide
- \$442 million in revenue for 2013

**#1 in M2M embedded modules**

**Over 80 million M2M devices deployed**

# Sierra Wireless “Inside”

# We are enabling a connected world

By providing intelligent wireless solutions to 100's different applications

# The M2M Opportunity

**Power of connected devices and services is easy to understand**

**Application concepts  
are (somewhat) obvious**

**Improved healthcare,  
more responsive service,  
better safety and security...**

**ROI is compelling**

**Better inventory management,  
higher service revenue and  
lower costs, fuel savings and  
higher asset utilization...**

**Market potential is huge**

**Billions of connected  
devices...**

# The M2M Challenge

“So, I want to add connected services to my product...”

**Product Manager**

“So, I want to add wireless connectivity to my device...”

**Design Engineer**

“So, I want a wireless-based solution to my business problem....”

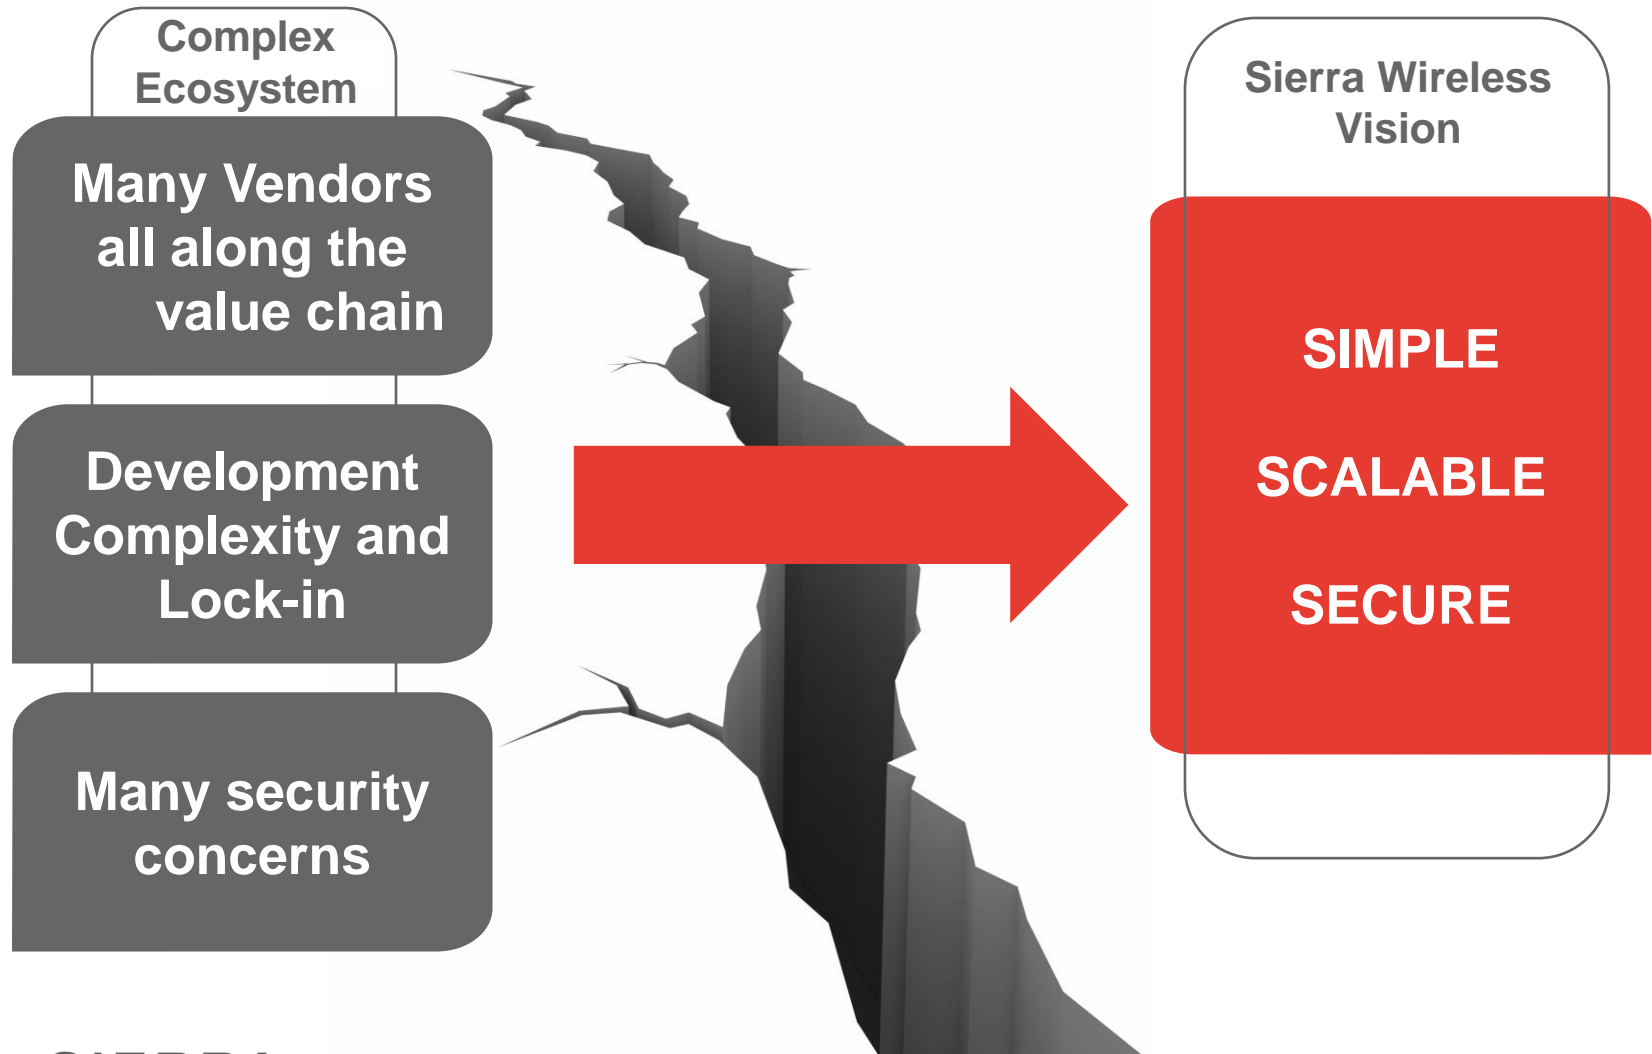

**IT or Operations Manager**

....where do I start?

# Top#3 Success Factors in the M2M Ecosystem

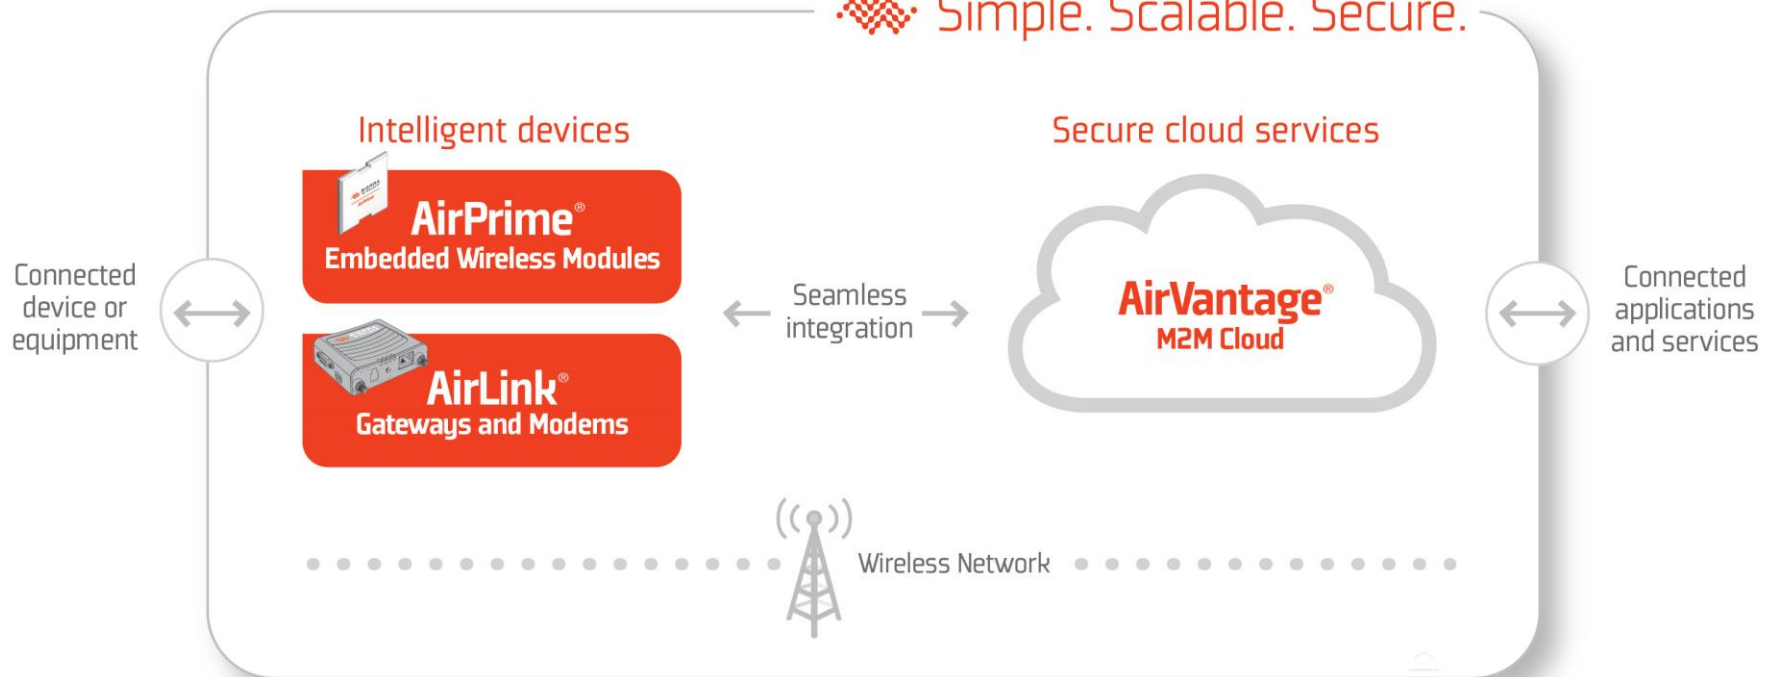

**What is Sierra Wireless doing to help?**

# Sierra Wireless Device-to-Cloud Solutions

Simple. Scalable. Secure.

Leading-edge  
intelligent devices

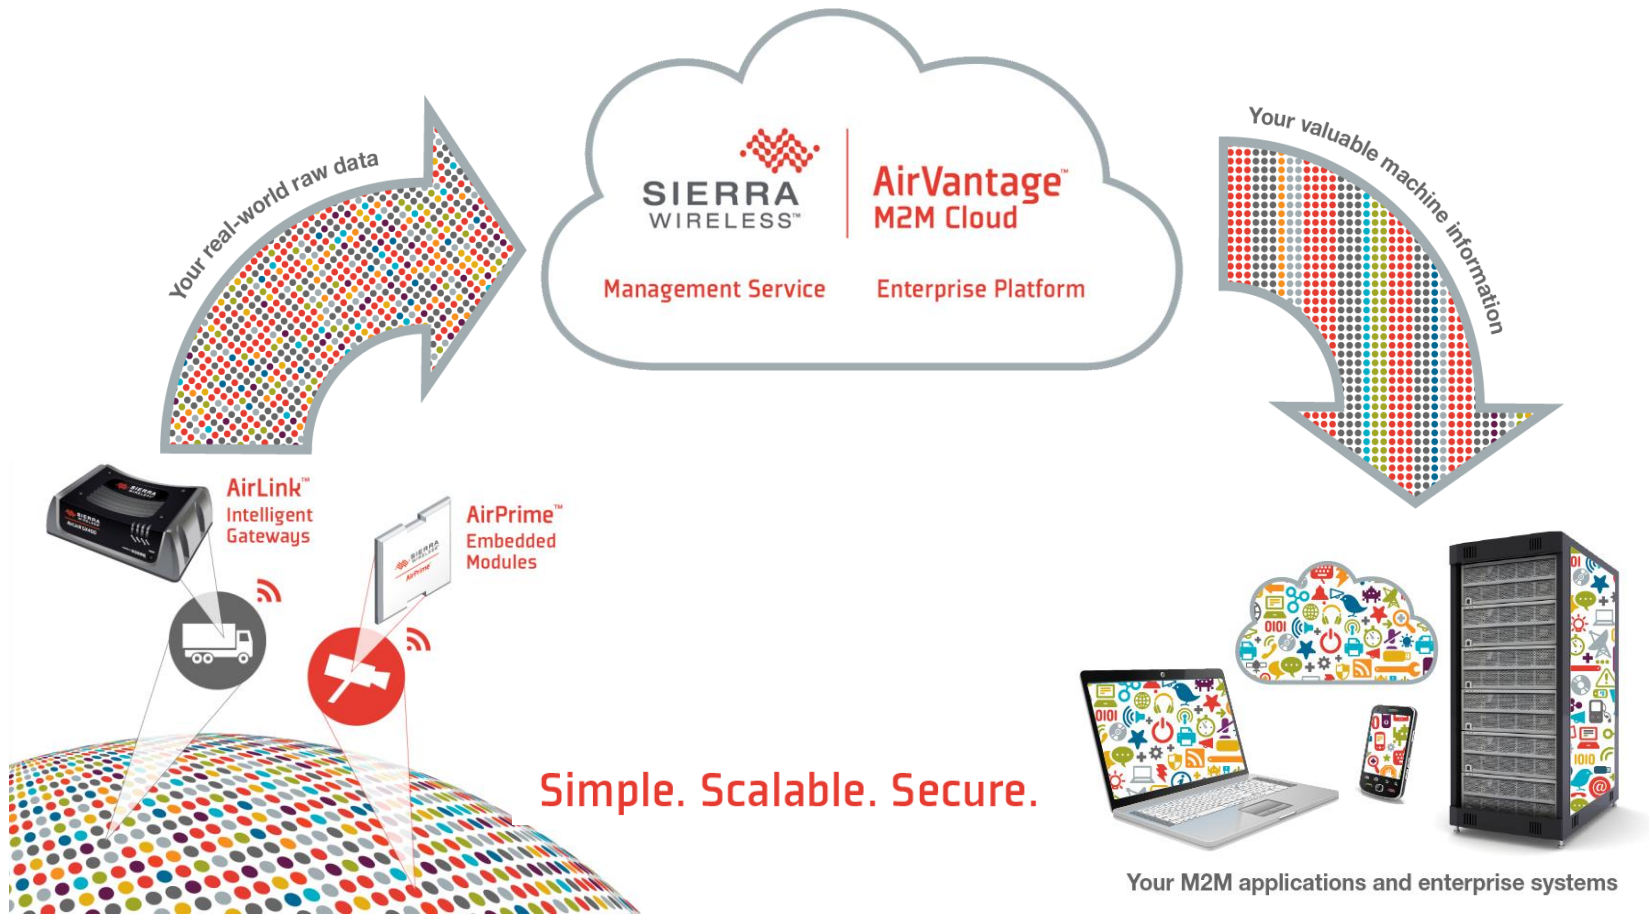

Secure cloud  
services platform

Faster time to market +  
lower costs

# AirVantage<sup>®</sup> M2M Cloud : End to End Security

# A TRUE Developer Community

The most active M2M developer community

**Developer Forum** – <http://forum.sierrawireless.com>

- **1,200** unique active users in the last year
- **30,000** posts and **7,000** topics → huge knowledge base!
- **3,000** posts in the last year
- **800** new topics in the last year

**Developer Zone** – <http://developer.sierrawireless.com>

- **550** documents
- **8,500** unique visitors each month
- **220+** AirVantage M2M Cloud developer trial accounts registered in the last 12-months

**Developer Day Event in Paris (on 13<sup>th</sup> June 2014)**

# Example 1: Smart Metering Project

# Example 1: Smart Metering Project

## Deployment

- Deployments (1M+ units) in UK (O2), New Zealand (Vodafone), Australia, South East Asia, Africa

## Solution

- EDM I embeds an AirPrime wireless modules in each of their meters to offer GPRS/EDGE point-to-point connection.
- Application Framework to embedded software (specific protocols) into the modem
- Management Services to allow scalable and secure mechanism to upgrade the modem once deployed in the field

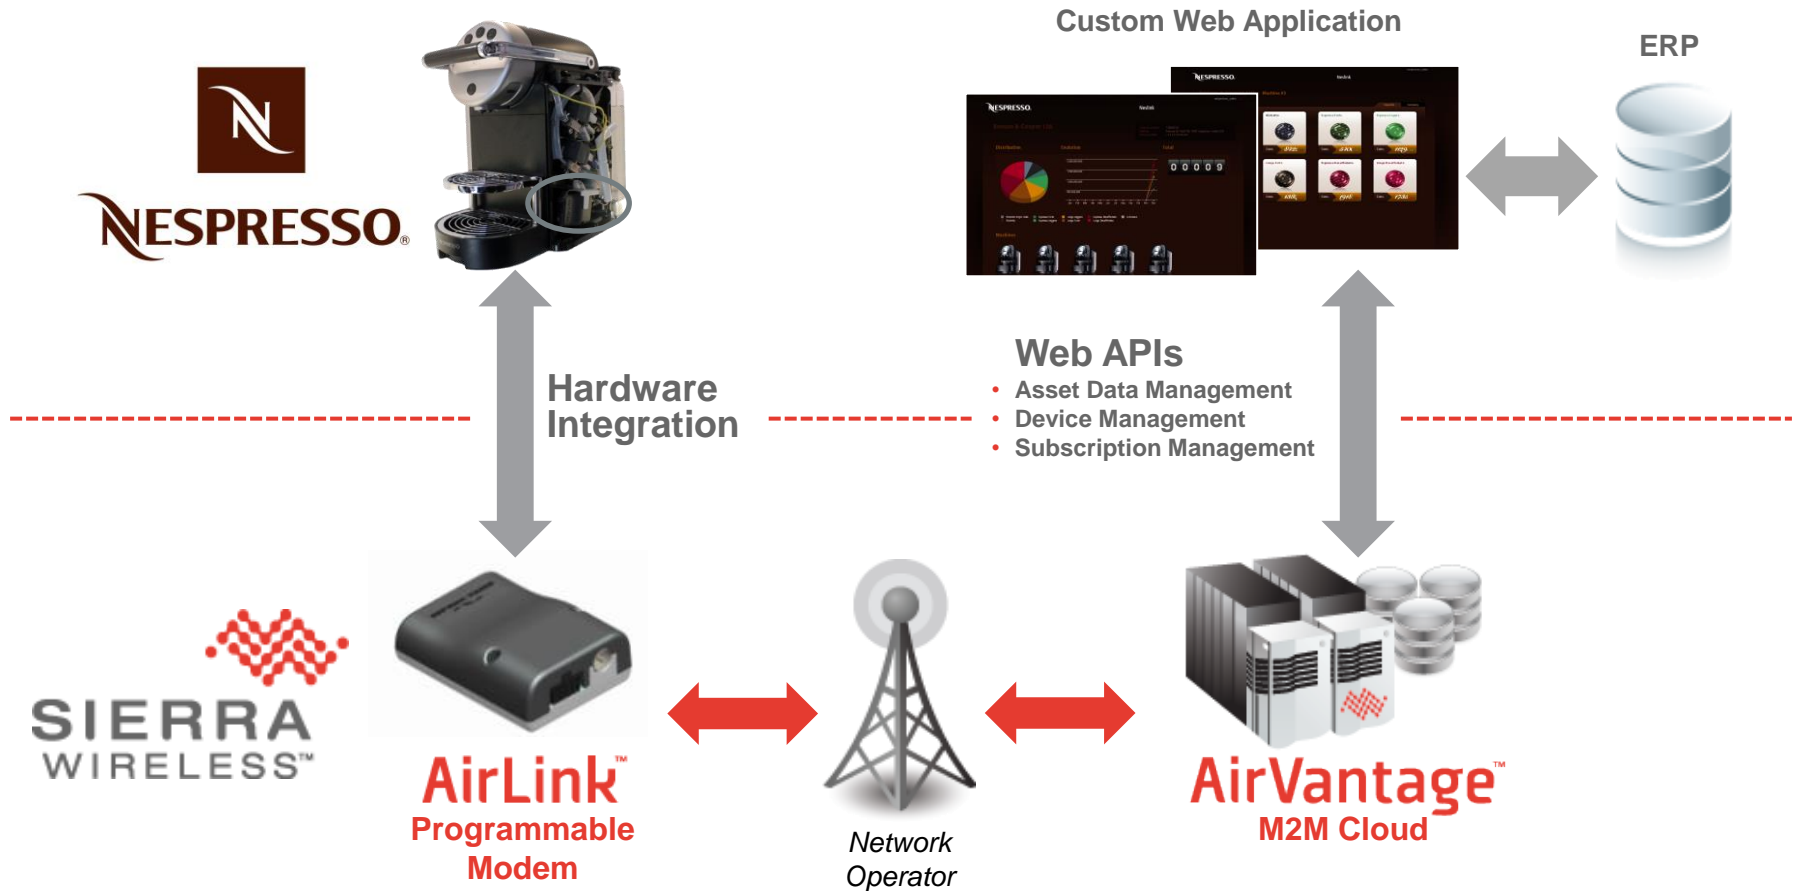

## Benefits

- Cost effective 2G point-to-point connectivity
- Flexibility to customized software application
- Capability to offer scalable device management

 EDM I

# Example 2: Connected coffee machines

**Accelerating M2M Application Development & Deployment**

# Example 3: Connected water purification systems

# Future technologies : 4G/LTE Momentum

---

- First to deliver 4G LTE embedded modules in early 2011, certified on major networks: AT&T, Verizon Wireless, Sprint
- Over **2 million units** Sierra Wireless 4G/LTE products shipped to date in M2M Worldwide
- Proven track record of successfully implementing 4G wireless solutions in mobile consumer, automotive, networking segments
- First to introduce automotive-grade LTE embedded module featuring the most advanced architecture with multicore capability

# Conclusion

---

M2M/Internet of Things is a **reality**

the market is **growing tremendously**

the **3 success factors** for a technology supplier: make the  
technology

**Simple. Scalable. Secure.**

**4G/LTE** arrival in **Europe** will create **new opportunities** in  
M2M

**Thank you!**

  
**SIERRA**
